The following is a first action on the merits of application Serial No.10/552,003, filed October 4, 2005.

Examiner's Amendment to the Drawings

The following change to the drawings has been approved by the examiner:

In Fig. 1 of the drawings, the legend – PRIOR ART – must be added.

In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

The above change in the drawing will obviate an objection to the drawings. See MPEP § 608.02(g).

Allowable Subject Matter

Claims 1-23 are allowed.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The prior art of record fails to show or render obvious a clutch device as defined in claims 1 and 12, and in particular, including a cylindrical tubular slipper having radial projections which form axially oriented recesses, the slipper having a first interlocking member; a cylindrical coupling member having radial projections which form axially

Art Unit: 3681

oriented recesses, the coupling member having a second interlocking member; and rollers located in the pockets formed by the recesses, wherein the tubular slipper and coupling member are axially displaceable relative to one another between the recited first and second positions, engaging or disengaging the interlocking members such that the recesses are aligned or misaligned.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Information Disclosure Statement

Receipt is acknowledged of the Information Disclosure Statements filed October 4, 2005, February 24, 2006, April 10, 2006, May 4, 2006, July 6, 2006, and March 6, 2007. The cited documents have been considered.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Overbeek('557) and Stone('6200 show roller clutches with recesses inner and outer members. Fukui et al.('964) shows dual roller clutches. Weismann('451) and Ashikawa et al.('250) show gears coupled to shafts via roller clutches. Williams('680) is cited to show the roller clutch of Fig. 3A.
